

# AKSHAY KUMAR BOLISHETTI

+91 6302106447 | akshaybolishetti2@gmail.com | GitHub | LinkedIn | LeetCode | Portfolio

## EDUCATION

### Bharat Institute of Engineering and Technology

B.Tech in Computer Science and Engineering, CGPA: 8.5/10

2025 – 2029

Hyderabad, India

- Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, DBMS, Operating Systems, Computer Networks

## PROJECTS

### StudyOS — Full-Stack Learning Management Platform | React, Spring Boot, PostgreSQL, Flyway, OAuth2/JWT

Personal Project

- **Architected a full-stack LMS** with a React frontend and Spring Boot REST backend across five modules (Home, DSA Tracker, Roadmap, AI Chat, Dashboard), using a normalized PostgreSQL schema with Flyway-managed migrations for versioned schema changes.
- **Implemented secure authentication** using Google OAuth2 with stateless JWT-based session management, replacing traditional server-side sessions to support scalable, horizontally-deployable auth.
- **Designed a dual-schema data model** separating DSA progress tracking from language/framework learning, avoiding a single overloaded table and enabling independent scaling of each module's queries.
- **Integrated third-party APIs under real-world constraints:** consumed LeetCode's unofficial GraphQL API for automated progress sync and NVIDIA NIM's LLM API for an in-app AI chat assistant, using Spring WebClient with configured timeouts and retry logic to handle upstream API fragility.
- **Applied a consistent ApiResponse<T> wrapper pattern** across all controllers for uniform success/error handling, and designed with pagination and indexing in mind for DSA history at scale.
- **Built a responsive, theme-aware UI** (dark/light mode) with CSS Modules and a persistent navbar, focused on clean, minimal information density across all five modules.

### Enterprise Procurement System | Java, Spring Boot, MySQL, Git

Infosys Springboard

- **Built RESTful backend services** in Java and Spring Boot to manage purchasing, vendor records, and multi-step approval workflows.
- **Designed relational schemas** in MySQL for procurement records and order tracking, and used Git for modular, version-controlled development.
- **Implemented role-based login** for employees and managers, allowing employees to raise tickets for hardware/software issues (e.g., equipment repair or replacement) that route to the appropriate manager for review.
- **Automated status notifications** via email and in-app alerts to keep employees informed at each stage of the approval workflow, including rejection reasons and delivery details on approval.

## TECHNICAL SKILLS

- **Languages:** Java, JavaScript, SQL, HTML, CSS
- **Backend:** Spring Boot, Spring Security, REST APIs, WebClient, JWT/OAuth2
- **Frontend:** React, CSS Modules, responsive design
- **Databases:** PostgreSQL, MySQL, Flyway migrations
- **Tools & Practices:** Git, GitHub, Maven, Postman, VS Code, API design, third-party API integration
- **Core CS:** Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks

## CERTIFICATIONS

- NPTEL – Programming in Java (Top 2%, 98th percentile)
- IBM Full Stack Software Developer Professional Certificate (Coursera)

## ACHIEVEMENTS

- Solved 250+ problems on LeetCode across arrays, DP, graphs, and trees
- Designed and shipped two full-stack applications independently, from schema design to deployment-ready backend architecture
